TamStar™ (tested as DALSA 0605) is the latest drought resistant St. Augustinegrass hybrid from Texas A&M AgriLife Research, bred specifically to suit climates of the southern United States. TamStar will only be sold as certified sod by licensed growers.

Key Features
- Highly sterile hybrid
- Little to no off-type contamination in production fields
- Drought resistant
- Deep rooting potential
- Highly tolerant to gray leaf spot disease
- Tolerant to southern chinch bug
- Wide adaptation in the southern U.S.

Application
Home lawns and other recreational sites across the southern United States

Chisholm

At Home, on the Course
Chisholm is a medium-texture zoysiagrass that is cold hardy into the northern region of the U.S. transition zone. Developed by Texas A&M AgriLife Research and the Kansas Agricultural Experiment Station, this cultivar features rapid establishment and recovery rates as well as superior turf quality compared to Meyer zoysiagrass. Chisholm underwent testing in the National Turfgrass Evaluation Program’s 2002 Zoysiagrass Test as DALZ 0102.

Key Features
- Comparable cold hardiness*
- Superior turf quality*
- Rapid rate of establishment
- Rapid recovery rate following damage
- Good shade tolerance
- Good fall color retention
- High shoot density
- Low seedhead number
- Good resistance to bluegrass billbug
- Excellent zoysiagrass mite resistance
- Good resistance to dollar spot

*compared against other transition zone-adapted zoysia japonica varieties

Application
Golf course fairways, tees and roughs as far north as Wichita, Kansas
**KSUZ 0802**

**Zoysia**

**Beauty and Brawn**

KSUZ 0802 (commercial name forthcoming) is a cold hardy hybrid zoysiagrass (Z. japonica x Z. matrella) co-developed by Texas A&M AgriLife Research and the Kansas Agricultural Experiment Station. It features finer leaf texture and superior density to ‘Meyer’ (see Texture and Density Comparison.) Its superior turfgrass quality makes KSUZ 0802 the ideal choice for transition zone golf course fairways and tees across the U.S.

**Key features**

- Cold-hardiness equivalent to Meyer
- Finer leaf texture than Meyer
- Better density than Meyer
- Superior turfgrass quality

**Application**

Golf course fairways and tees, and home lawns across the U.S. transition zone

**DALZ 1308**

**Zoysia**

**Bred for the Greens**

DALZ 1308 (brand name forthcoming) is a warm-season, putting-green-grade hybrid zoysiagrass (Z. minima x Z. matrella) featuring superior turfgrass quality, an ultra-fine leaf and high density. DALZ 1308 remains under testing across the southern U.S. in the National Turfgrass Evaluation Program Warm-Season Grass Putting Greens Test of 2013.

**Application**

Golf course putting greens across the southern U.S.

**NTEP Testing locations**

- Tuscon, Arizona
- Fayetteville, Arkansas
- Tamarisk C.C, Rancho Mirage, California
- Jay, Florida
- Griffin, Georgia
- Bloomington C. C, Bloomington, Indiana
- Lexington, Kentucky
- Mississippi State University
- College Station, Texas
- C. C. of Richmond, Richmond, Virginia
