Ultra-dwarf Zoysiagrass

Meet the first Zoysia hybrid bred for golf course putting greens
Ultra-dwarf Zoysiagrass for Golf Course Putting Greens

DALZ 1308 (brand name forthcoming) is a next-generation zoysiagrass that stands toe-to-toe with some of the best greens-type turfgrasses on the market. Zoysiagrasses, compared to other turfgrasses, produce high quality turf with fewer inputs and reduced cost due to their natural tolerance to disease, insects, shade, cold, and salinity stress.

DALZ 1308 Traits

- Ultra-dwarf variety
- High performance putting surface
- Unmatched winter color retention
- Fewer inputs needed
- Very fine leaf texture
- High shoot density
A PREMIUM QUALITY PUTTING GREEN SURFACE WITH FEWER INPUTS

THE SCIENCE

Developed by Texas A&M AgriLife Research scientists in Dallas, DALZ 1308 represents a scientific breakthrough in its standing as the first zoysiagrass hybrid intended specifically for putting greens. It was bred for superior performance by crossing two different zoysiagrass species, Z. minima and Z. matrella.

DALZ 1308 was tested across the southern U.S. as part of the 2013 Warm-Season Grass Putting Greens National Turfgrass Evaluation Program.

Go to www.ntep.org/ws.htm for information on the performance of DALZ 1308 by region, and visit dallas.tamu.edu to read more about the AgriLife Research turfgrass breeding program at Dallas.

NTEP TESTING LOCATIONS

- Palm Springs, California
- Tuscon, Arizona
- College Station, Texas
- Starkville, Mississippi
- Fayetteville, Arkansas
- Bloomington, Indiana
- Lexington, Kentucky
- Henrico, Virginia
- Griffin, Georgia
- Jay, Florida
- Tequesta, Florida
WHERE TO FIND DALZ 1308

The exclusive national license for production and sale of DALZ 1308 is held by Bladerunner Farms of Poteet, TX. The company will grant sub-licenses to select producers across the U.S.

Contact Bladerunner Farms owner David Doguet at www.bladerunnerfarms.com for information on sub-licensing DALZ 1308.
